

Solutions to Number Theory Problems

- a presentation proposed for the MAA So Cal Nevada Conference, November 1, 2014

Author: Alvin Kim, from Calle Mayor Middle School and Fullerton Mathematical Circle

Research project adviser: Bogdan D. Suceavă, California State University Fullerton

Abstract: We present solutions to several number theory problems. Some of the problems have originally been published in *Gazeta matematica* and distributed during the workshops of the Fullerton Mathematical Circle, while the others come from the American Invitation Mathematics Examination. The techniques used in the solutions consists of mainly two things: divisibility and factorization.
