REZUMAT

1. Fie $C \in \text{Int}(BAD)$ si $r = AB \wedge ED \wedge AD \wedge BE \wedge (BC \wedge CD) \wedge AE$. Atunci :
 - a) C se afla in interiorul cercului circumscris $\triangle ABD$ si $r = 0$;
 - b) $ABCD$ este inscriptibil si $r = 0$;
 - c) C se afla in exteriorul cercului circumscris $\triangle ABD$ si $r = 0$;
2. Fie $ABCD$ patrilater convex . Atunci are loc relatia vectoriala $\overrightarrow{AD} \wedge \overrightarrow{BC} \wedge \overrightarrow{AB} \wedge \overrightarrow{DC} \wedge \overrightarrow{BD} \wedge \overrightarrow{AC}$.
3. Fie patrilaterul $ABCD$.
 - a) Daca $ABCD$ este inscriptibil ,atunci are loc relatia $\frac{AB}{CD} \wedge \frac{AD}{BC} \wedge \frac{BD}{AC} \wedge \frac{AB}{CD} \wedge \frac{AD}{BC} \wedge \frac{BD}{AC}$ (*) ;
 - b) Daca $\min(\max(m(\hat{A});m(\hat{D}));\max(m(\hat{B});m(\hat{C})) = 90^\circ$ si are loc relatia (*) , atunci $ABCD$ este inscriptibil.
4. Pentagonul convex $ABCDE$ este inscriptibil daca si numai daca
$$\overrightarrow{AB} \wedge \overrightarrow{AE} \wedge \overrightarrow{FH} \wedge \overrightarrow{AF} \wedge (\overrightarrow{BC} \wedge \overrightarrow{CE}) \wedge \overrightarrow{AH} \wedge (\overrightarrow{BD} \wedge \overrightarrow{DE})$$
 si $AB \wedge FE \wedge AE \wedge BF \wedge AF \wedge (BC \wedge CE)$, unde
$$\overrightarrow{AC} \wedge \overrightarrow{BE} \wedge \{F\} \text{ si } \overrightarrow{BE} \wedge \overrightarrow{AD} \wedge \{H\}$$
.
5. Fie $ABCD$ patrilater inscriptibil . Atunci are loc relatia
$$AB \wedge ED \wedge EC \wedge BC \wedge ED \wedge AE \wedge AD \wedge BE \wedge CE \wedge CD \wedge BE \wedge AE = 0$$
.
